

MultiCIM Releases eXadox™ DT V3.0 — an Innovative Semi-Automated File Naming and Storage Solution for Managing Business Documents and Images

MONTREAL—August 10, 2009—MultiCIM Technologies Inc. has officially announced today the release of [eXadox™ DT](#) version 3.0, an innovative and affordable solution for managing business documents and images. eXadox DT semi-automatically names files so that they can be found faster and more precisely by everyone. An advanced search feature has been added to help quickly and more precisely locate files. A dynamic viewer has also been added to more efficiently view and properly identify images and Microsoft Office™ (Word, Excel and PowerPoint) documents without the need to open them fully. The current version is more flexible and adaptable for a wider range of enterprises.

eXadox DT was first introduced in 2007 as a general purpose file organizer software that was specifically designed to ensure that everyone names their files based on the department or company file naming convention (see: [file naming convention examples](#)). The main benefit for this approach is that it is easier to work together as a team when files need to be shared if everyone names and stores their files using the same rules. eXadox works with document scanners and with scanner control software. The most important and unique feature of eXadox has been the semi-automated structured file naming and storage feature that assigns the file name and storage folder with minimal keying by the user. The software also automatically creates all the folders without user having to do so.

To satisfy more types of users, ranging from a casual user to a power user, version 3.0 of eXadox DT now comes in Basic, Standard and Advanced Editions. A highly appreciated common characteristic is that all editions can be installed and personalized by the user without having to rely on IT staff. The degree of personalization and operational features vary between editions (see: [Edition Comparisons](#)). Personalization enables the user or a department to create / modify a Profile (a.k.a. Template) that helps define the rules to abide to for a specific storage and file naming convention or policy. All editions work together and can take advantage of shared Profiles.

To increase user productivity some major improvements were made to both the eXadox Search and eXadox Viewer components. The new version includes a quick search and an advanced search mode. Both modes are as fast, yet more precise than the standard Microsoft filename search tools. The enhanced eXadox Viewer component is quite sophisticated and flexible because the user can now manipulate images and view entire Microsoft Office™ (Word, Excel and PowerPoint) documents for accurate identification without having to open them fully in their native MS Office application. An ergonomic bonus is that the Viewer window has zooming capabilities, it can be quickly enlarged and moved to anywhere on the main or secondary display.

“Our existing clients found that the old version of eXadox was great. Their only wish list item was that they dearly wanted eXadox DT capabilities directly from within the Microsoft Office Suite.” stated Vince Santaguida, President of MultiCIM Technologies Inc. “Actually, we are about to announce an eXadox version for Microsoft Office ([eXadox MSO](#)) to address this need but I personally cannot wait to see their reaction when they start experiencing the generous new features we voluntarily added to the new eXadox DT just for the sake of improved productivity and ergonomics.”

eXadox DT works within Microsoft Windows, XP, 2003 and Vista. The starting price is \$125US per licence and has provisions for multilingual support.

About MultiCIM Technologies Inc.

MultiCIM Technologies Inc. is a software development and systems integration company founded in 1986 that specializes in process automation and simulation. It is the developer for all [eXadox™](#) and [eXtractoflex™](#) software applications. MultiCIM initially introduced eXadox DT in 2007 following a request from Manulife to help its advisers in their efforts to easily and affordably transition towards paperless office practices. Although the current client base is predominately in the document intensive insurance and financial sectors, MultiCIM's software development efforts over the last two years have been dedicated to render eXadox products adaptable to all industries no matter their size or needs.
